CHECK ALL SERVICES TO BE OFFERED

☐ Tattooing
 ☐ Body Piercing
 ☐ Permanent Cosmetics
 ☐ Branding

The owner, employees and practitioners of the above body art facility have developed this Infection Prevention and Control Plan to prevent accidents, to eliminate or minimize occupational exposure to blood or other body fluids, and to break the cycle of cross-contamination between practitioners and clients. This plan is intended to comply with the Safe Body Art Act.

The body art facility owner shall provide on-site training when tasks demanding potential occupational exposures are initially assigned, anytime there are changes in the procedures or tasks, when new technology is adopted for use in the facility, but not less than once per year. Records shall be maintained on-site for 3 years. Changes must be immediately reflected in this document and resubmitted to the Sacramento County Environmental Management Department (EMD) for review.

All body art practitioners and employees have access to the plan and can review it at any time during their work shifts. Each practitioner is required to have proof of annual Bloodborne Pathogen (BBP) certification and a current valid body art practitioner registration from an approved provider.

An owner of a body art facility shall notify the Sacramento County EMD in writing within 30 days of the resignation, termination, or NEW hire of a body art practitioner at the body art facility. 119312. (j) The county may SUSPEND or REVOKE the permit of a body art facility if a person who does not possess a valid practitioner registration is allowed to perform body art.

This plan is effective as of this date.	Date:

PROPER HANDWASHING

Proper handwashing is a key component to preventing cross-contamination. All sinks must be permanently plumbed and equipped with hot and cold running water, containerized liquid soap, and single-use paper towels that are dispensed from a wall-mounted, touchless dispenser that is accessible at all times to the practitioner.

Describe the location of each handwashing sink in facility.

Describe when handwashing is required in your facility.

Who is responsible for ensuring **PPE** are properly stocked?

PERSONAL PROTECTION EQUIPMENT

*Personal Protection Equipment (**PPE**) must be disposable or washed by a commercial laundry service.*

Describe the location of gloves available within facility.

What Personal Protective Equipment is worn during body art procedures?

Who is responsible for ensuring hand sinks are properly stocked.

BARRIER FILM/SHEATH

Describe the use of barrier film, dental wraps, absorbent pads, paper towels, aprons, bibs and any film used in your facility prior to the performance of body art and describe what equipment is covered and with what type of barrier is used in each instance.

SKIN PREP	How will skin be prepared prior to the procedure? If skin at the procedure site is to be shaved, describe the solution used to prepare the skin and type of razor used.		
What solution or transfer agent is used to apply stencils or mark work sites?		All disposable razor must be discarded where?	
DRESSING: When covering a procedure site, a sterile dressing must be used. (Plastic wrap not approved) What type of dressing (s) are used?			

PROCEDURES FOR CLEANING AND DECONTAMINATION

1. Describe procedures for cleaning and decontaminating environmental surfaces, including but not limited to countertops, chairs/stools, trays, arm rests, headrests, procedure area, and tables.

Work surfaces and equipment are cleaned before / after each procedure by...

Cleaning and decontamination: What surfaces and objects will be disinfected?

Cleaning and decontamination: How often will these surfaces and objects be disinfected?

Setup procedures for body art services.

Setup procedures are as follows ...

Teardown procedures following the completion of any form of body art procedure.

Teardown procedures are as follows...

Describe steps taken to **prevent cross contamination** of instruments or the procedure site during a body art procedure.

Cross contamination is prevented by...

PREVENTION OF CROSS CONTAMINATION

Wash and dry hands. Put on a clean apron, bib or lap pad over clean clothing. Put on any personal protective equipment that is appropriate for the task. Don clean, previously unused, disposable examination gloves on both hands just prior to the procedure. Gloves shall be worn throughout the procedure. If gloves come into contact with an object or surface other than the client's prepared skin or material to be used for the procedure, or if a glove is torn or punctured, both gloves shall be removed, hand hygiene performed, and new, clean, previously unused, disposable gloves shall be donned. If gloves are removed for any reason during a procedure, hand hygiene shall be performed prior to donning new, clean, previously unused, disposable examination gloves.

The practitioner shall wear disposable gloves on both hands when touching, decontaminating, or handling a surface, object, instrument, or jewelry that is soiled or that is potentially soiled with human blood.

Washing of contaminated instruments:

An instrument or reusable item that does not come in contact with non-intact skin or mucosal surfaces shall be washed with a solution of soap and water, using a brush that is small enough to clean the interior surfaces and decontaminate after each procedure.

This washing will occur at the sink located at:

PROCEDURE FOR PROTECTING CLEAN AND STERILE INSTRUMENT PACKS

Clean instruments and sterilized instrument packs shall be placed in clean, dry, labeled containers, or stored in a labeled cabinet that is protected from dust and moisture.

Where will sterilized packaged instruments be stored in facility?

When evaluating sterilized equipment, what things are you looking for to ensure they are safe to use?

Are sterilization packages opened in front of the customer prior to the procedure?

☐ YES

☐ NO

What will be done with a compromised sterilized package?

FACILITY MANAGEMENT	Describe the cleaning procedure and frequency for each of these areas.
Customer waiting area:	
Restroom:	
Break room:	
Decontamination and sterilization room:	
When and where are animals allowed in your facility?	
Where will eating, drinking and smoking be allowed by employees and customers?	
List the location of trash bins/receptacles, use of disposable liners, where liners are stored, and frequency of trash removal. What items will go into the trash receptacles?	

RECORD KEEPING

*Disposable, single-use, pre-sterilized instruments are used, the following records must be maintained for a minimum of **90 days after use**.*

A record of purchase: Where are these records maintained?

Written proof on company or laboratory letterhead showing that the presterilized instruments have undergone a sterilization process. Written proof shall clearly identify the instruments sterilized by name or item number and shall identify the lot or batch number of the sterilizer run.

This written proof will be maintained in the facility at?

Client log documentation must be kept of all procedures, 1) the practitioner performing the procedure, 2) client name, 3) lot numbers of presterilized instruments used, and 4) date of procedure.

Where are these records maintained?

All information gathered from the client that is personal medical information and that is subject to the federal Health Insurance Portability and Accountability Act of 1996 (HIPAA) or similar state laws shall be maintained or disposed of in compliance with those provisions.

Consent and medical questionnaires will be stored at: _____
